

# INSTRUCTIONS TO RUN THE CODE:

## STEP1:

- Initially import the java project in your Computer.
- Use Eclipse IDE to run the project.

## STEP2:

- Download the following jar file to establish connectivity with the PHPMYADMIN database:  
[mysql-connector-java-5.0.8-bin.jar](#)
- In your eclipse project add this jar file using the following instructions:  
Right-click on Project->Build Path->Right-click->Configure Build Path->Libraries->Add External JAR->Add the specified JAR.

## STEP3:

- Download and install XAMPP-PHPMYADMIN where you will have to import the database file provided by us which will contain all the database tables used for the project along with all the data.
- After successfully installing XAMPP software, go to the START menu->XAMPP->start APACHE and MYSQL.
- To import the database provided by us go to phpmyadmin, import the database.

## STEP4:

- To get started with the project run the following java file:  
LoginPage.java
