SANTA CLARA UNIVERSITY
JUNE 2015

ACKNOWLEDGEMENTS:

We are pleased to acknowledge Prof. M. Santoro for his invaluable guidance during the course of this project work.

We are also grateful to other members of the Design Center team who co-operated with us regarding some issues with the softwares.

Last but not the least, Bhavini Thakkar Grader of COEN 275 also co-operated with us nicely for the smooth development of this project.

INTRODUCTION

Overview

This report discusses the result of the work done in development of “Caltrain Reservation System” for booking the caltrain ticket on java platform. Caltrain network is a very vast system to be handled manually and its computerization will prove to be of great help to the employees and the passenger. This Software allows user to do a booking for a journey in any train from anywhere to anywhere; handling reservation and cancellation of tickets.

Background and Motivation

Caltrain Reservation is done manually by a user at caltrain reservation counters or need to reload there clipper card whenever it runs of the cash. Users has to wait for a long time in the queue to get the reservation. Time and man power is needed to carry out these things. To avoid all the above pitfalls the system proposed is “Caltrain Reservation System”.

Methodology

To implement the above goals , the following methodology needs to be followed :

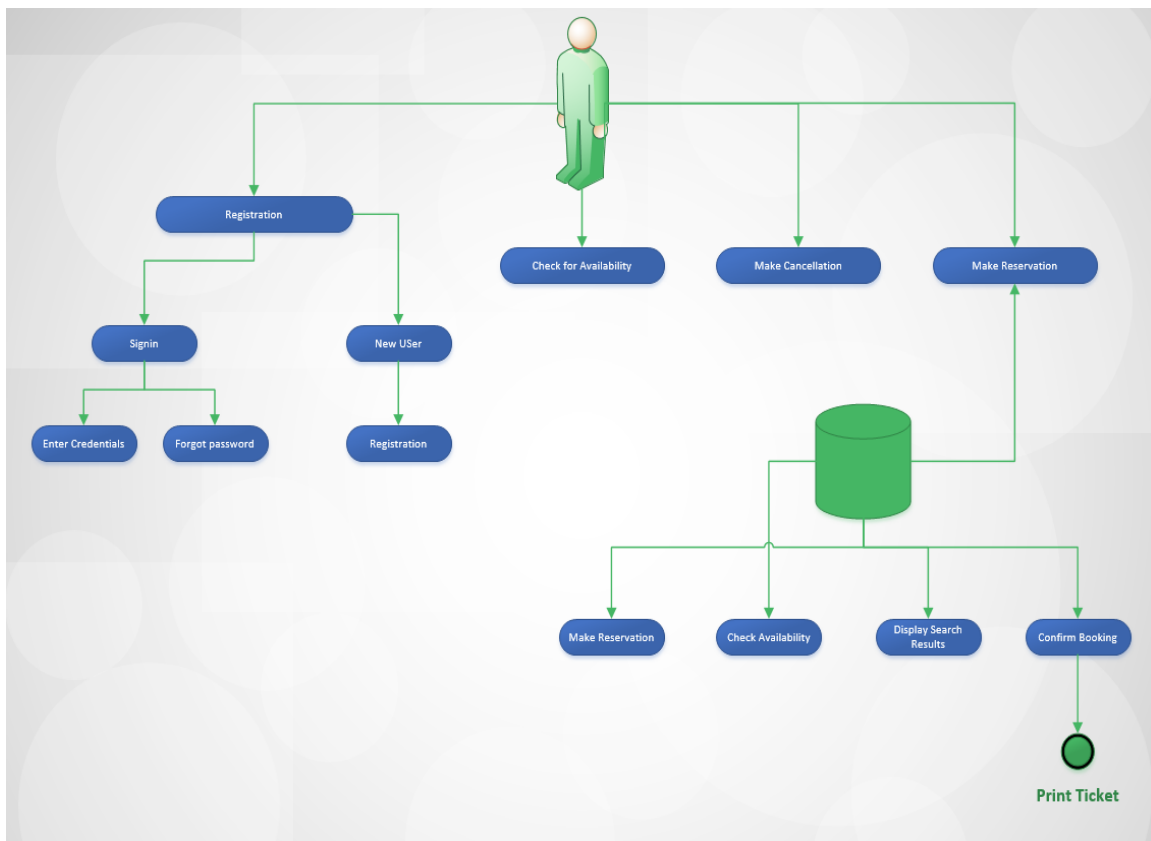

- 1) Registration for a user account.
- 2) Searching for the train from a particular source to destination
- 3) Displaying the availability of the trains from chosen source and destination with the record of train status including dates for which tickets can be booked.
- 4) Confirmation of booking
- 5) Printing the ticket.

TOOLS DESCRIPTION:

User Interface

The tool is very user friendly and intuitive and uses a GUI interface implemented in JAVA to communicate with the user. Various features are self – explanatory. Forms are easy to fill in and components can be added, removed and updated very easily. The application includes tool-tip hints to give a brief description of the particular input field. List boxes are used to display all the components at once so that user can see all the components of a particular type at once. One can just select the component and modify the component.

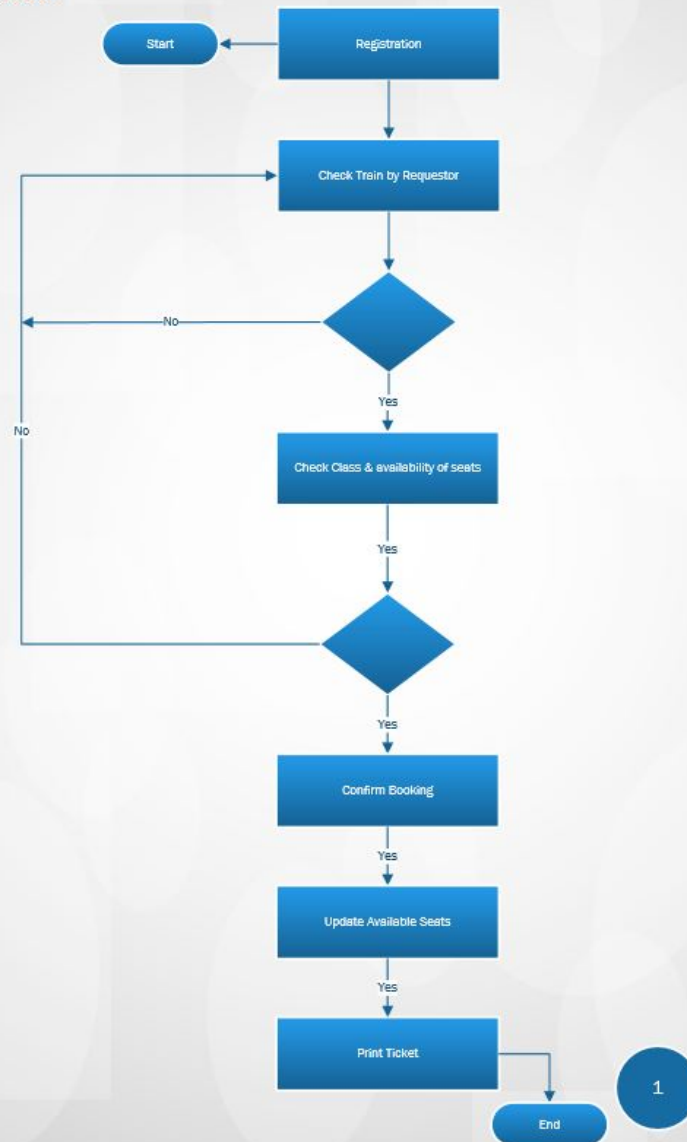

Solution Specification and Design

PROCESS FLOW DIAGRAM

SPECIFICATIONS

The image shows a web page titled "Caltrain Reservation" in a black header. The main content area is gray. On the right side, there is a "Log In" section. It contains a "Username" input field with the text "Username|" inside, a password input field with "*****" inside, a "Forgot Password" button, a "Sign In" button, and a "New User" button.

LOGIN PAGE: Allows user to sign in with his/her existing account, or a new user can create there own account. If the existing user forgets his/her password then he can click on forget password button.

The image shows a web page titled "Forgot Your Password!" in a black header. The main content area is gray. It contains two sections. The first section is for security questions. It has a heading "First please give us the answers to the two security question you chose when you set up your account." and a sub-heading "Keep in my mind that you will need to type the answer exactly the same way you entered while account creation." Below this, there are two security questions: "Security Question 1: What is your favourite color ?" and "Security Question 2: Which city were you born ?". Each question has an "Answer:" label and an input field. The second section is for email verification. It has a heading "Please provide your email address and we will sent you your password within next few minutes." and a sub-heading "Please confirm you're not a Robot". Below this, there is an "Email:" label and an input field. There is also a CAPTCHA image showing the number "2353" and a "Submit" button.
